

CHILL Talent Office - Talentday 2024

The Talent Day offers you the opportunity to meet companies that present themselves as interesting internship possibilities or potential employers and to network with various technical companies and educational institutions from the region.

Tuesday, November 26, 2024 | 1:00 PM - 5:00 PM | Brightlands Chemelot Campus

There are three thematic areas aimed at creating a concrete connection between education programs and companies/institutions. The physical setup of the Talent Day will also be based on these themes:

Molecular Health and Engineering

The theme "Molecular Health and Engineering" brings together companies involved in acquiring and applying biomolecular knowledge in healthcare and other sectors. It focuses not only on understanding biological mechanisms at the molecular level but also on using this knowledge to develop, apply, and/or produce innovative methods, treatments, and equipment in the Life Sciences.

Sustainable Chemistry and Energy

Sustainable Chemistry and Energy focuses on environmentally friendly, economically feasible chemical processes and energy sources. It aims for energy efficiency, renewable resources, and recyclable products to minimize ecological impact and meet growing demands.

Circular Materials and Product Engineering

The theme "Circular Materials and Product Engineering" focuses on optimizing the lifecycle of materials and products to promote sustainability. This is done through reuse, recycling, and innovative designs that minimize waste and extend product life. The goal is a more sustainable, efficient economy.

Register now via the "apply" button, fill in your details, and confirm them so you can attend this exciting event! **Note:** After registration, you will receive two emails: a confirmation email and later a safety instruction that must be played with sound to receive a QR code for entry.
